Loschmidt
ancilla SWAP
destructive SWAP
Hadamard U-statistic
(a)
median $\log_{10}$ total executions
qubits n
(b)
$10^3\,(b - b_{\mathrm{ref}})$ [decades / qubit]
$n = 2$–20
$n \geq 8$
0.6059
1.2025
1.2025
0.6066
LE
anc. SWAP
destr. SWAP
Had.
(c)
ratio of median total executions
Hadamard / Loschmidt
destructive / ancilla SWAP
qubits n
(d)
median $P(\hat{g} = 0)$
total executions T
(e)
median $P(\mathrm{correct} \mid \hat{g} \neq 0)$
total executions T
(f)
median $P(\mathrm{correct\ sign})$
total executions T
