(a)
local slope [decades / qubit]
window centre n (3-point windows)
$p = 0$
10^{-2}
b_{LE}
10^{-4}
10^{-1}
b_{SWAP}
10^{-3}
$\log_{10} 16$
$\log_{10} 8$
$\log_{10} 4$
(b)
exponent ratio $b_{\mathrm{SWAP}}/b_{\mathrm{LE}}$
depolarizing strength p
entangling, global
RX global, $n \geq 8$
RX global, $n = 2$–20
Prop. 5 (RX)
RX local, $n \geq 8$
2
4/3
(c)
b_S' [decades / qubit]
local depolarizing strength p
Proposition 6
measured ($n \geq 8$)
measured ($n = 2$–20)
(d)
crossover n^*
global depolarizing strength p
B1 entangling cells
RX product
